Eliachar Feig

Senior Mobile & Full-Stack Engineer | iOS, Flutter, React | Applied AI Systems
Jerusalem District, Israel

Summary

I'm a Senior Mobile & Full-Stack Engineer focused on building scalable, production-grade products that integrate applied AI into real-world systems. My foundation is in mobile engineering (iOS with Swift/SwiftUI/UIKit and Flutter/Dart), where I've delivered enterprise applications used in high-scale environments. Over time, my role evolved into full-stack ownership - designing APIs, integrating backend services, managing authentication flows, and delivering features end-to-end from architecture to production. Beyond mobile, I design and build AI-powered systems. I've developed full-stack applications using FastAPI, PostgreSQL, Docker, Firebase Authentication, and modern React/Next.js frontends - including a multi-provider LLM platform with streaming architecture and per-user data isolation. I recently built and shipped an AI-powered mobile application on Google Play, integrating LLM-based features for personalized insights and workflow automation. This involved prompt engineering, real-user iteration, production deployment, and continuous optimization. My focus is at the intersection of product thinking, system design, and applied AI — building software that is technically sound, scalable, and genuinely useful. Experience

Balink

3 years 6 months

iOS & Flutter Developer

November 2024 - Present (1 year 4 months)

Jerusalem

* Designed, built, and maintained production-grade mobile applications for large-scale enterprise environments, including global luxury brands such as Cartier and Chanel.

- * Developed and owned complex user flows and state management systems, emphasizing scalability, performance, and clean, maintainable architecture.
- * Led improvements to user experience and application speed by modernizing the frontend stack, including migrating legacy UIKit implementations to SwiftUI with an MVVM architecture.
- * Collaborated closely with backend engineers, product managers, and designers to deliver end-to-end features from specification through production.
- * Continuously improved performance, stability, and security across multiple releases, reducing technical debt and increasing overall system reliability.

iOS Developer

September 2022 - Present (3 years 6 months)

Jerusalem

Education

Scale-Up velocity

Development Program - Excellent team in Accademia, Computer Programming · (July 2022 - September 2022)

Hadassah Academic College

Bachelor of Science - B.Sc, Computer Science · (October 2019 - July 2022)
